

A "Go to Page Number" Macro  
WordPerfect Magazine  
Tips

Most WP users know about the ability to create a page number style. What if you want "Go to Page" (referring to the next page) at the bottom of the page plus a page number? This problem is solved with the included GOTOPAGE.WPM macro. It's a big help to us. This macro first deletes any Footer B codes. *Note: If you've already created a Footer B, you may want to create a Footer A or block and append it to an existing Footer A.*

Next, the macro will determine the current page with the {SYSTEM}Page command, add one to it and place it in Footer B. It'll then repeat this step for every page. The Footer B code on the last page of the document is deleted.
