

Add a Fancy Graphic Horizontal Line
WordPerfect Magazine
Tips

I create a horizontal graphic line (see figure below) that makes a good divider between the title and body of any report. I use the included HLINE.WPM macro to speed up the process.

To insert the line graphic line, press (Alt-F10), type "hline" and press (Enter). And that's all there is to it! The line will not display on-screen but will display when you press (Shift-F7), 6 to view the document graphically. It should also print without a problem.

– Jacquelyn D. Harris, Chesterfield, VA

Note: This "line" is actually three lines, one on top of the other. Accordingly, you may need to go into Reveal Codes (Alt-F3) to make sure any text surrounding the lines is placed correctly.
