

Create a Monthly Calendar, Version 2
WPUiverse.com
By Tony33

My mother wanted a calendar to fit the front of her computer, so included here as CAL2.WPM is a more flexible version, based on Old Programmers magical macro, published in WPUiverse.com.

The size is scalable from fairly small (about 2 cm width per month) to huge (one month wide on landscape paper). The shape can be changed by selecting how many months per row. If the calendar fits on a single page, a border is offered.

For some larger combinations, the breaks may not occur in the correct place. If this happens, try a slightly different width or font size. Maybe someone knows how to fix this?

I can test it only with A4 paper so there may be unknown problems. If anyone wants to modify it further, please go ahead.

The settings for the sample below are for the year 2025, U.S. letter size paper, calendar width 26, 4 months on each row, font size 10, Helvetica font, no mention of the year and no border.
