

Easy Subscript and Superscript
WordPerfect Magazine
By S. Scott Zimmerman

Note: The bulk of this article was about ways to improve science writing in WP. Most of the article has been deleted.

The included SUB.WPM and SUPER.WPM macros provide easy execution of subscript and superscript notation.

You can use each macro in two ways:

1. Play either macro, then type some text. That text will now be in your desired notation. Press the right arrow key to return to regular type.

OR

2. Type some text. Later, come back to that text and block it (Alt-F4). Then play one of the two macros, and the text will be in your desired notation.
