

Go to a Table Cell Without Being in Table Edit Mode
WordPerfect Magazine
Tips

I've written the included GOTOCELL.WPM macro that allow me to quickly go to a cell address without being in Table Edit mode.

To run the macro, place your cursor anywhere inside the table. Presss (Alt-F10), type "gotocell" and press (Enter). A prompt appears that asks you to enter the cell address you'd like your cursor to be in. Type a cell address (e.g., A4) and press (Enter). The macro automatically places your cursor in the cell you specified.
