

Help for John Land's Macro Collection
By Michael Smith

The included JLHELP.WPM is a macro to provide help, or at least a kind of aide memoire, for John Land's excellent set of macros. I downloaded these recently, and although I have been using them for only a short time, I am very impressed with them and have modified some to suit my own purposes.

The macro should be placed in your WordPerfect macro directory. The JL' keyboard layout should then be modified to attach the help macro to the F3 key.

(For anyone not familiar with how to do that, press (Shift-F1), 5, 7 to edit the keyboard layout. Then press 7 to retrieve the macro. You will be asked which key to attach it to. Press F3 and confirm that you wish to replace the existing key assignment.)

Once this has been done, pressing F3 will give a small menu with two choices, either the regular WordPerfect help function, or a series of JL macro help pages (see figures below), through which you can scroll backwards and forwards. Press Q at any page to exit.

This is freeware. I hope it may be useful to someone.

```
