

Selective Text Centering
WordPerfect Magazine
Tips

I create the Sunday program for our church services and have had a difficult time centering song titles between text on the left and text on the right, as shown in Figure 3 below. Using a Center command only centers the text between left and right margins, not between the typed text. I set out to find a way to do this and ended up with the included CENTER.WPM macro to automate the process for me.

Before using the macro, first type the text at the left margin, then press Flush Right (Alt-F6) and type the text at the right margin. Now with your cursor anywhere on this line of text, press Macro (Alt-F10), type "center" and press (Enter). You will be prompted with the question "Would you like dot leaders (Y/N)?" Press (Y) Yes if you would like dot leaders separating the text in the middle from the text on the left and the text on the right. You will then be prompted with the message "Enter the text to be centered and press (Enter)." Do so and you're all set.

-- Marriner Merrill, Bellevue, NB

Note: The dot leader function doesn't appear to work.
