

TextOut/5 Utility for Exporting WP 5.x Files to Text or RTF Format
WPUniverse.com
By Edward Mendelson

Another contributor to this site told me about an excellent shareware utility called TextOut/5, which quickly converts WP 5.x files to text or RTF format. WordPerfect does not need to be present on your system, and the program can convert multiple files with a single command. (The original files are not changed.) The author of the program has generously provided a free, non-restricted copy of the program, which is bundled in the included TO5.ZIP file.

The program is a DOS utility that runs from the command line. One interesting feature is an option that converts WP 5.x files to RTF format (though without the original fonts and some other formatting).
