

Toggle Short and Long Document Name Display

By Darkhorse Industries

The included SLNAMES.WPM macro allows you to select a short or long document name display. This macro should be copied to an ALT key or to your favorite keyboard for maximum speed (e.g., rename or copy SLNAMES.WPM to ALTN.WPM).

The short name display is the WordPerfect default when you press F5 (List Files). The long name display has a document's summary name on the left side of the screen and the document file name on the right side of the screen. A document summary can be created by choosing File > Summary from the menu, pressing 2, then typing the desired document name.

Play the macro to switch between the two display modes.

This is another free macro from Darkhorse Industries, Winterville, GA.
