

Assign a List of Terms to Variables 0-9
WordPerfect Magazine
Tips

Use the included LIST2VAR.WPM macro to assign a list of text or phrases to variables zero through nine.

To run the macro, type your list of words or phrases on a clear screen, each item on a separate line. Place your cursor at the top of the list and press (Alt-F10), type "list2var" and press (Enter). To insert a word from the variables, press (Alt-x) where x is the number of the list variable you want to use, such as (Alt-5). Note: The first variable assigned is zero.

Exiting WordPerfect automatically clears the variables.

– Brandt Kuperstock, Oak Ridge, TN

Note: To see a menu of the variables created from your list, run the VARMENU.WPM macro included with this collection. You can then insert one of the variables from the menu.
