

Cool Case Conversion Macros
WordPerfect Magazine
Tips

The included UPPER.WPM and LOWER.WPM macros have saved me a tremendous amount of time when the Caps Lock key is accidentally pressed. The UPPER.WPM macro changes the character the cursor is on to uppercase, and the LOWER.WPM macro changes the character to lowercase.

Using either macro is simple: Just place the cursor on the character to change and run the desired macro. To change several letters or words at once, press (Esc) in WP5.1 or (Ctrl+R) in WP6.x, type the desired number of letters to change and run the macro.
