

Create Fancy Page Borders
WordPerfect Magazine
By David Kosorok

The included FANCY.WPM macro allows you to create a graphics border around any paper size with a graphic of your choice.

To use the macro, from a clear screen press Play Macro (Alt+F10), type *fancy* and press (Enter). The Frame Border dialog box prompts you to enter the graphic you would like to use. If you are unsure of the name, press List (F5) and (Enter). Scroll to the graphic you want and press (Enter). After the macro is finished, you can type text that will be centered both vertically and horizontally inside the frame. To view the border press, Print/Fax (Shift+F7) and (7) Print Preview. Press Exit (F7) to return to your document screen.

The figure below shows a sample border.
