

Reverse Text within Graphic Boxes  
WordPerfect Magazine  
Tips

It's very easy to create reversed text in a graphics box, but it requires a lot of commands and selections in various dialog boxes to create it. To simplify the matter, I created the included REVERSEG.WPM to automate the steps of creating reversed text in a figure box.

With your cursor where you want the reversed text to be inserted, play the macro by pressing Play Macro (Alt+F10), typing "reverseg" and pressing (Enter). In Text Mode you may not be immediately aware of this, but your screen has changed to the Box: screen. Type your text, then press Exit (F7) to return to the document screen. Line 9 of the macro can be changed to a different font name if you don't like the Bodoni that is listed in the macro. Just be sure to type the font name exactly as it appears in the font listing.
