

Terrific Text Borders
WordPerfect Magazine
By David Kosorok

The included TEXTBORD.WPM macro allows you to use text to create personalized page borders by entering a phrase that wraps around a page.

Start the macro at a clear document screen by pressing Play Macro (Alt+F10), typing *textbord*, then pressing (Enter). The Text Border Macro dialog box appears (see the figure below). To enter the border text, press (1) Border Text:, type the phrase you'd like (up to 55 characters) and press (Enter). To select your font, press (2) Font:. Use either the (Up Arrow) or the (Down Arrow) keys to highlight the desired font, or type in the font name and press (Enter). To select your font size, press (3) Font Size:. You can either type in a point size (generally a point size between 14 and 36 looks best) or click on the up and down arrows to the right of the number with your mouse pointer. Press (Enter) to accept.

You can go back and make changes to the information in the dialog box if you'd like. When you're satisfied, press (Enter) or click the OK button. The Creating User Box # dialog box appears, informing you of the macro's progress. When the macro is finished, the Print Preview screen displays your border. Press Exit (F7) to go back to the main edit screen. To print your border, press Print/Fax (Shift+F7), (R) Print.

You can use the macro on any paper size, and the text will automatically wrap around the page without a hitch. Go to a clear document screen and select a paper size by pressing Format (Shift+F8), (3) Page and (4) Paper Size/Type. Highlight a paper size, press (1) Select, then press (Enter) twice to return to the main document screen. Run the text border macro and it will adjust to the new paper size.

Instead of using a different paper size, you can try the new Subdivide Page feature. This feature subdivides (or arranges) your current paper size into several pages. At a clear edit screen, press Format (Shift+F8), (3) Page and (6) Subdivide Page. At the Subdivide Page dialog box, enter the number of columns and the number of rows you would like, and press (Enter) three times to return to your main document screen. Run the text border macro as you did above; the macro will adjust to the new page size.

You can add spice to the text by using the WordPerfect Compose characters in between words (see Appendix A: Character Sets in *WordPerfect 6.0 Reference Manual*). It's easiest to view the Compose characters in Graphics mode, so press Screen (Ctrl+F3), (3) Graphics. To use a Compose character, first run the macro. In the Border Text: text box, type your text and Compose character. To insert a Compose character, press Compose (Ctrl+W), (Tab), (2) Set. Select the desired character set and press (Enter).

Press (3) Characters and use your mouse or cursor keys to select the desired character, then press (Enter).

Here is a sample border:
